

Platform Knowledge Base & System Specification

Official Context Document for RAG Ingestion & Assistant Query Resolution

Document Title:	Platform Knowledge Base	Target System:	RAG Vector Database & AI Assistant
Document Version:	v1.1.0	Status:	Active / Approved

1. Executive Summary & Core Platform Purpose

This platform is a community-driven social ecosystem designed for users to track their personal progress, share journey updates, discover like-minded individuals through shared interest tags, and engage in real-time direct messaging.

RAG Ingestion Directive

When answering user queries, strictly adhere to the functional boundaries outlined in this document. Do not extrapolate features that are not explicitly documented here.

2. Progress Posting & Journey Sharing

The posting engine allows users to log and publicize updates regarding their ongoing goals and progress.

Posting Mechanism

- Users trigger the posting workflow by clicking the **Post** button on their main dashboard or navigation bar.
- **Text Content Requirements:** A written description or text update is mandatory to submit a post. Text-only posts are fully supported.
- **Media Attachments:**
 - Image selection is **optional**. Users can attach single or multiple images to support their progress update.
 - **Unsupported Formats:** Videos, GIFs, audio files, and external file links are currently **NOT supported**.

Feed Visibility

- Published posts are immediately distributed to the community feed.
- Other platform members can view text updates, inspect attached images, and navigate to the creator's profile directly from the post item.

3. User Discovery & Profile Exploration

Profile Access Methods

Users can view another individual's public profile via two specific entry points:

1. **Post Interaction:** Clicking on the user's avatar or display name on any community post.
2. **Interest Search Results:** Selecting a user card from the interest-based search discovery interface.

Search Rules & Privacy Constraints

- **Name Search Disabled:** Searching for users by real name, display name, handle, or username is **explicitly disabled**.
- **Interest Matching Algorithm:** Discovery is driven purely by interest tags. Users enter or select specific interest tags (e.g., #Coding, #Fitness, #UI Design), and the system returns a list of individuals with overlapping interest profiles.
- **Connection Initiation:** Users can initiate direct connections or send messages directly from the interest discovery results or profile view.

4. Real-Time Messaging & Connections Section

Instant Messaging & Dynamic Connections

- **Real-Time Chat:** Users can send direct, instant messages to any discovered user on the platform.
- **Automated Connection Creation:** Sending a direct message automatically places the recipient into the sender's **Connections** section. No manual "friend request" or mutual acceptance step is required.
- **Conversation Persistence:** Once a conversation is initiated, the recipient remains permanently saved in the user's Connections section.
- **Simplified Re-engagement:** Users do not need to perform an interest search again to message existing contacts; they can simply open the Connections tab and resume messaging directly.

5. Comprehensive Feature & Rule Matrix

Feature / Action	Supported?	Operational Rule / System Behavior
Post Text Without Image	YES	Users can publish text-only posts without attaching images.
Post Image Without Text	NO	A written text description is mandatory for all posts.
Video / GIF Uploads	NO	Only image attachments are supported. Video and GIF uploads are prohibited.
Search User by Name	NO	Search by name/handle is disabled. Discovery is strictly interest-based.
Search User by Interest	YES	Users search by interest tags to find people sharing similar goals.
View Other User Profile	YES	Accessible via clicking user avatars on posts or in interest search results.
Real-Time Direct Messaging	YES	Instant messaging is available for all connected or discovered users.
Auto-Add to Connections	YES	Messaging a user automatically saves them to the Connections tab.

6. RAG Assistant Response Matrix (Frequently Asked Questions)

User Inquiry / Intent	Canonical AI Assistant Response
<i>"Can I post a progress update without an image?"</i>	Yes, you can share text-only updates about your progress. Image uploads are completely optional, though a text description is required.
<i>"How do I upload a video of my progress?"</i>	Video uploads are not currently supported. You can only post text updates and optional image attachments.
<i>"How do I find my friend John by his name?"</i>	Searching by name is not supported on our platform. You can discover users by searching for shared interests in the discovery section.
<i>"How do I save someone to my connections?"</i>	Simply send them a direct message! As soon as you send a message to a user, they are automatically added to your Connections section.
<i>"Where can I find my past conversations?"</i>	All your past chats are stored in your Connections section. You can easily access and resume your messages there without searching for the user again.
<i>"How do I view another user's profile?"</i>	You can view any user's profile by clicking on their avatar/name on a post, or by selecting their profile from the interest search results.
